I LEGAL BASES AND GENERAL CONDITIONS

1 This European technical approval is issued by Deutsches Institut für Bautechnik in accordance with:
   - Guideline for European technical approval of "Watertight Covering Kits for Wet Room Floors and/or Walls - Part 1: Liquid Applied Coverings with or without Wearing Surface", ETAG 022-1.

2 Deutsches Institut für Bautechnik is authorized to check whether the provisions of this European technical approval are met. Checking may take place in the manufacturing plant. Nevertheless, the responsibility for the conformity of the products to the European technical approval and for their fitness for the intended use remains with the holder of the European technical approval.

3 This European technical approval is not to be transferred to manufacturers or agents of manufacturers other than those indicated on page 1, or manufacturing plants other than those indicated on page 1 of this European technical approval.

4 This European technical approval may be withdrawn by Deutsches Institut für Bautechnik, in particular pursuant to information by the Commission according to Article 5(1) of Council Directive 89/106/EEC.

5 Reproduction of this European technical approval including transmission by electronic means shall be in full. However, partial reproduction can be made with the written consent of Deutsches Institut für Bautechnik. In this case partial reproduction has to be designated as such. Texts and drawings of advertising brochures shall not contradict or misuse the European technical approval.

6 The European technical approval is issued by the approval body in its official language. This version corresponds fully to the version circulated within EOTA. Translations into other languages have to be designated as such.

II   SPECIFIC CONDITIONS OF THE EUROPEAN TECHNICAL APPROVAL

1   Definition of product and intended use

1.1   Definition of the construction product

The watertight covering "KEMPEROL 022 Sealing" is a kit. It consist of a two-component liquid waterproofing membrane on basis of polyurethan, a reinforcement fleece "KEMPEROL 500 Vlies" on the basis of polyester.

The kit is intended to be used under a wearing surface, e.g. tiles, bonded with the adhesive "KEMPERDUR MT" on the basis of cement mortar. The adhesive is CE-marked according to EN 120047.

The wearing surface and the jointing material are not part of the kit, but are considered during the assessment of the intended use of the product.

Annex 1 shows the system build-up for wet areas and Annex 2 shows the sealing details.

1.2   Intended use

As an assembled system the "KEMPEROL 022 Sealing" against penetration of water and moisture on floors and walls in wet rooms is intended for uses where requirements concerning safety in case of fire, hygiene, health and the environment and safety in use as well as durability in the sense of the essential requirements N° 2 to N° 3 of the Council Directive 89/106/EEC shall be satisfied.

Details for sealing pipe penetrations, floor gullies, sealing joints, corners and edges belonging to the kit are cut of the polyester fleece and are given in Annex 2.

The intended use of the watertight covering under a wearing surface is to create a floor and wall watertight covering on indoor wet areas at possible operating temperature of 5 °C till 40 °C.

The following uses are intended:

- Floor and/or wall surfaces with only occasional direct exposure to water, e.g. at a good distance from shower or bathtub.
- Floor and/or wall in shower areas or around bathtubs used for a few showers daily, e.g. in ordinary dwellings, multifamily houses and hotels.
- Floor and/or wall surfaces with exposure to water more frequent or of longer duration than normally anticipated in dwellings, e.g. public wet rooms, schools and sport facilities.

The waterproofing kit shows certain levels of performance according to ETAG 022 part 1

The watertight membrane is intended to be used on flexible substrate e.g. plywood, chipboard, gypsum, anhydrite or similar material vulnerable to water and on rigid substrates e.g. masonry or concrete.

The product should be used in connection with the following types of gullies:

Stainless steel or plastics – type PE or PP – with flange for attaching of collar/membrane or with clamping ring and collar

---

7 EN 12004:2007 Adhesives for tiles – Requirements, evaluation of conformity, classification and designation

8 "Guideline for European technical approval of watertight covering kits for wet room floors and or walls": Part 1 "Liquid applied coverings with or without wearing surface" (ETAG 022-1), date of applicability 18 July 2007
The gullies are not part of the kit. It is up to the responsibility of the user to use suitable products of the given types.

The verifications which are the basis of this ETA give the reason for the assumption of an intended working life of the watertight covering of 25 years, provided that the watertight covering kit is subject to appropriate use and maintenance. These provisions are based upon the current state of the art and the available knowledge and experience.

"Assumed intended working life" means that it is expected that, when this working life has elapsed, the real working life may be, in normal use conditions, considerably longer without major degradation affecting the Essential Requirements.

The indications given as to the working life of the watertight membrane cannot be interpreted as a guarantee given by the manufacturer or the approval body. They should only be regarded as a means for choosing the appropriate criteria for a watertight covering kit in relation to the expected economically reasonable working life of the works.

2 Characteristics of product and methods of verification

2.1 Characteristics of the watertight covering

The components of the watertight covering show the technical values with respect to the permissible tolerances which are stated in the manufacturer's technical dossier (MTD) to this ETA.

The permitsible tolerance does not affect the characteristics of the products and the assembled system negatively.

The chemical composition and the technical characteristic values of the components of the kit and the manufacturing methods are confidential and deposited with DIBt.

The reaction to fire behaviour of the waterproofing system is classified in class E according to EN 13501-1:2002-6.

According to the manufacturer's declaration the composite waterproofing system taking account of the EU database does not contain any dangerous substances.

Within the scope of this approval there may be other requirements applicable to dangerous substances resulting from transposed European legislation or applicable national laws, regulations and administrative provisions.

There may be other requirements applicable to the products resulting from other applicable national laws, regulations and administrative provisions and transposed European legislation.

These requirements need also to be complied with, when and where they apply.

The verified property values of the watertight covering lead to characteristics and categories according to ETAG 022 part 1. They are stated in Annex 1.

An evaluation oriented at the intended use can be carried out with them by the user with respect to national regulations of the member states.
2.2 Methods of verification

The assessment of the fitness of the watertight covering for the intended use with regard to the essential requirements N° 2 to N° 4 was performed following the ETAG 022 "Watertight covering kits for wet room floor and/or walls" part 1 "Liquid applied coverings with or without wearing surface".

3 Evaluation and attestation of conformity and CE marking

3.1 System of attestation of conformity

According to the decision 2003/655/EC\textsuperscript{11} of the European Commission system 2+ for the procedure of the attestation of conformity (Annex III, clause 2(ii) first possibility of Directive 89/106/EC) applies to the watertight covering kit.

In addition, according to the Decision 2003/655/EC\textsuperscript{12} of the European Commission system 3 of the attestation of conformity (Annex III, clause 2(ii) second possibility of Directive 89/106/EC) applies with regard to reaction to fire for this product.

The system 2+ of attestation of conformity is defined as follows:

System 2+: Declaration of conformity of the product by the manufacturer on the basis of:

(a) Tasks for the manufacturer:
   - initial type–testing of the product;
   - factory production control;
   - testing of samples taken at the factory in accordance with a prescribed test plan.

(b) Tasks for the notified body:
   - certification of factory production control on the basis of:
     - initial inspection of factory and of factory production control;
     - continuous surveillance, assessment and approval of factory production control.

System 3: Declaration of conformity of the product by the manufacturer on the basis of:

(a) Task for the manufacturer:
   - factory production control;

(b) Task for the notified body:
   - initial type-testing of the product.

3.2 Responsibilities

For the component adhesive is provided that the attestation of conformity processes for the adhesive according to EN 12004 is done on basis of this standard. The required additional attestation of conformity is related to the kit and shall be done by the declaration of conformity by the manufacturer and the CE marking of the kit according to clause 3.3 respectively 3.2.1.3.

3.2.1 Task of the manufacturer

3.2.1.1 Factory production control

The manufacturer shall exercise permanent internal control of production. All the elements, requirements and provisions adopted by the manufacturer shall be documented in a systematic manner in the form of written policies and procedures, including records of results performed. This production control system shall insure that the product is in conformity with this ETA.

\textsuperscript{11} Official Journal of the European Communities L 231/12 of 17 September 2003
\textsuperscript{12} Official Journal of the European Communities L 209/33 of 2 August 2001
The factory production control shall be in accordance with the appropriate part of the control plan\textsuperscript{13} which is a confidential part of the MTD. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited with DIBt.

The manufacturer may only use initial materials according to the MTD. He shall inspect or control the initial materials on acceptance according to the control plan.

The factory production control follows the identifying properties of the components and the example of the control plan as given in ETAG 022 part 1.

The results of the factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

The records shall include at least the following information:

\begin{itemize}
\item name of the product and of the initial materials,
\item type of inspection or control,
\item date of manufacture of the product, batch N° if needed, and date of inspection or control of the product or of the initial materials,
\item result of inspections or controls and, as far as applicable, comparison with the requirements,
\item signature of the person responsible for the factory production control.
\end{itemize}

The records shall be kept for at least five years. On request they shall be presented to DIBt.

Details concerning extent, type and frequency of the tests or inspections to be performed within the scope of the factory production control shall correspond to the control plan which is part of the MTD to this ETA.

\textbf{3.2.1.2 Initial type-testing of the product}

The initial type-testing refers to the product properties stated in the appropriate part of the control plan to this ETA. It follows the example of the control plan as given in ETAG 022 part 1.

If the verifications underlying this ETA have been furnished on samples from the current production, these will replace the initial type-testing.

Otherwise the necessary initial type-testing shall be carried out according to the provisions of the control plan and observance of the required property values shall be ascertained by the manufacturer.

After changing the production process the initial type-testing shall be repeated.

\textbf{3.2.1.3 Other tasks for the manufacturer}

The manufacturer shall, on the basis of a contract, involve a body which is notified for the tasks referred to in section 3.1(b) in the field of the product in order to undertake the actions laid down in section 3.2.2. For this purpose, the control plan referred to in section 3.2.2 shall be handed over by the manufacturer to the notified body involved.

The manufacturer shall make a declaration of conformity, stating that the product is in conformity with the provisions of this ETA and shall mark the product with the CE mark according to clause 3.3. The declaration of conformity shall be accompanied by the factory production control certificate.

\textsuperscript{13} The control plan is a confidential part of the MTD to this ETA and deposited with DIBt. It contains the required information on the factory production control and on the initial type-testing. As far as this is relevant to the tasks of the notified body involved in the procedure of attestation of conformity the control plan will be handed over to the notified body. See section 3.2.2.
3.2.2 Task of the notified body

3.2.2.1 Initial type-testing with regard to reaction to fire

The appropriate part of the control plan states the information on the reaction to fire properties which have to be tested on initial type-testing by the notified body. In case of need it will be handed over for initial type-testing of the product to the notified body recognized for initial type-testing.

If the verifications underlying the ETA have been furnished on samples from the current production, these will replace the initial type-testing.

Otherwise the necessary initial type-testing shall be carried out according to the provisions of the control plan and observance of the required property values required in the ETA shall be ascertained by the notified body.

After changing the production process or starting the production in another manufacturing plant the initial type-testing shall be repeated.

3.2.2.2 Initial inspection of factory and factory production control

The appropriate part of the control plan states the information on the properties which have to be controlled by the notified body involved for initial inspection of factory and factory production control. The notified body has to control the devices and equipments and the documentation of the factory production control of the manufacturer when starting the production.

The notified body shall retain the essential points of its actions referred to above and state the results obtained and conclusions drawn in a written report.

The notified certification body involved by the manufacturer shall issue an EC certificate of conformity of the factory production control stating the conformity with the provisions of this ETA.

After changing the production process or starting the production in another manufacturing plant the initial inspection of factory and factory production control shall be repeated. The notified body shall issue a new EC certificate of conformity of the factory control stating the conformity with the provisions of this ETA.

3.2.2.3 Continuous surveillance, judgment and assessment of factory production control

The appropriate part of the control plan states the information on the product properties which have to be checked by the notified body involved. The frequency of this tasks should be twice a year.

The notified body shall retain the essential points of its actions referred to above and state the results obtained and conclusions drawn in a written report.

In cases where the provisions of this ETA and its control plan are no longer fulfilled the certification body involved shall withdraw the certification of conformity and inform DIBt without delay.

3.3 CE marking

The CE marking shall be affixed on the packaging of the kit of the watertight membrane "KEMPEROL 022 Sealing" or its accompanying documents.

The letters "CE" shall be followed by the identification number of the notified body, and be accompanied by the following additional information:

− name and address or identifying mark of the manufacturer,
− last two digits of the year in which the CE marking was affixed,
− number of the EC certificate for the factory production control,
− number of the European technical approval,
− number of the European technical guideline.

Notes on the CE marking are stated in Guidance Paper D "CE marking under the Construction Products Directive", Brussels, 1 August 2002
The components shall be specified as belonging to the composite waterproofing kit "KEMPEROL 022 Sealing".

ETA-09/0155

4 Assumptions under which the fitness of the product for the intended use was favourably assessed

4.1 Manufacturing

The components of the kit of the watertight membrane are factory-made according to the procedure laid down in the MTD.

The ETA is issued for the kit on basis of agreed data/information about the components, which identify the kit that has been assessed and judged and which are deposited at DIBt. Changes to the components of the kit or in the production process of the components, which change the results of the production process and/or the properties of the product and which are not in line with the deposited data should be notified to DIBt before the changes are introduced. DIBt will decide whether or not such changes affect the ETA and consequently the validity of the CE marking on the basis of the ETA and if so whether further assessment or alterations to the ETA shall be necessary.

4.2 Design and dimensioning

The fitness for the respective use of the watertight membrane results from the characteristic values and categories given in Annex 1.

The supplementing statements of the manufacturer stated in the MTD for design and application of the watertight system for creating a watertight covering under wearing surface for floors and walls in indoor wet areas shall be considered.

4.3 Installation

The fitness for use of the watertight membrane can be assumed only, if the installation is carried out according to the installation instructions stated in the MTD by the manufacturer, in particular taking account of the following points:

− installation by appropriately trained personnel,
− installation of only those components which are specified components of the kit,
installation with the required tools and adjuvants,
- precautions during installation,
- inspecting the substrate surface for cleanliness and correct treatment,
- inspections during installation and of the finished watertight membrane and
documentation of the results.

The information as to the
- method of repair on site,
- handling of waste products
shall be observed.

4.4 Manufacturer's responsibilities
It is the manufacturer's responsibility to make sure that all those who utilize the kit will be
appropriately informed about the specific conditions according to sections 1, 2, 4, and 5
including the annexes to this ETA and the not confidential parts of the MTD deposited to this
ETA.

5 Indications to the manufacturer

5.1 Packaging, transport and storage
Information on:
- Packaging
- transport and
- storage
are given in the MTD.

5.2 Use, maintenance and repair
Information on:
- Use
- maintenance
- repair
are given in the MTD.
