The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

European Technical Assessment ETA-03/0044 English translation prepared by DIBt

Specific part

1 Technical description of the product

The liquid applied roof waterproofing "KEMPEROL 2K-PUR" and "KEMPEROL 2C" are kits, which consist of the components:

- liquid applied roof waterproofing on the basis of polyurethane (two-component)
- polyester fleece as reinforcement

For an adequate adhesion of the waterproofing layer – depending on the type of substrate – a primer is required. In general, the primer belonging to the substrate is given in the manufacturer technical documents¹. In single cases the manufacturer is responsible to give guidance which pretreatment/primer is required.

The liquid applied roof waterproofing Materials can be applied by pouring and/or brushing.

The minimum layer thickness of the roof waterproofing applied is 2.0 mm.

As an assembled system these components form a homogeneous seamless roof waterproofing.

The liquid applied roof waterproofing "KEMPEROL 2K-PUR" and "KEMPEROL 2C" do not contain any substances that are intended to inhibit or prevent root penetration (root protection agents).

The components and the system build-up of the roof waterproofing "KEMPEROL 2K-PUR" and "KEMPEROL 2C" are given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The liquid applied roof waterproofing is used for the waterproofing of roof surfaces, terraces and balconies.

The product is suitable for compressible substrates (e. g. insulation boards) and non-compressible substrates (e. g. steel, concrete).

The product can be used for new roofs or for upgrading existing roof waterproofing. It can also be used on vertical surfaces (singular details).

The categorisation according to use is given in Annex A.

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of working life of the product of 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

The levels of use categories and performances given in Section 3 are only valid if the liquid applied roof waterproofing is used in compliance with the specifications and conditions given in Annex B and the installation instructions of the manufacturer stated in the technical documents.

1

The manufacturer's technical documents comprise all information necessary for the production and the installation of the product as well as for repair of the roof waterproofing made from that and it is deposited with DIBt.

3 Performance of the product and references to the methods used for its assessment

3.1 Basic Works Requirement 2: Safety in case of fire

| Essential characteristic | Performance |
|---------------------------|---------------|
| External fire performance | See annex A/B |
| Reaction to fire | See annex A |

3.2 Basic Works Requirement 3: Hygiene, health and the environment

| Content, emission and/or release of dangerous substances | | |
|--|---------------------------------------|--|
| Release scenario | S/W2 | |
| Substance/s classified as EU-cat. Carc. 1A and/or 1B ^{a)} | No performance assessed | |
| Substance/s classified as EU-cat. Muta. 1A and/or 1B ^{a)} | | |
| Substance/s classified as EU-cat. Repr. 1A and/or 1B ^{a)} | | |
| Essential characteristic | Performance | |
| Water vapour permeability | See annex A | |
| Watertightness | See annex A | |
| Resistance to wind loads | See annex A | |
| Resistance to mechanical damage (perforation) | See annex A, levels of use categories | |
| Resistance to fatigue movement | See annex A | |
| Resistance to the effects of low and high surface temperature | See annex A | |
| Resistance to ageing media (heat and water) | See annex A | |
| Resistance to UV radiation in the presence of moisture | See annex A | |
| Resistance to plant roots | See annex A | |
| Effects of variations in kit components and site practices | See annex A | |
| Effects of day joints | See annex A | |
| In accordance with Degulation (EC) No 1272/2008 | | |

^{a)} In accordance with Regulation (EC) No 1272/2008

^{b)} Assessment based on the detailed manufacturer's statements

3.3 Basic Works Requirement 4: Safety and accessibility in use

| Essential characteristic | Performance |
|--------------------------|-------------|
| Slipperiness | See annex A |

3.4 General aspects

The verification of durability and serviceability is part of testing the essential characteristics. Durability and serviceability are only ensured if the specifications of intended use according to Annex B and the specifications of the technical file of the manufacturer are kept.

European Technical Assessment

ETA-03/0044

English translation prepared by DIBt

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD 030350-00-0402 the applicable European legal act is: 98/599/EC and amended by Commission Decision 2001/596/EC.

The system to be applied is: 3

With regard to external fire exposure and reaction to fire for products covered by this EAD, the system to be applied is: 3

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 7 February 2023 by Deutsches Institut für Bautechnik

System built-up, categorisation of use and classifications

Annex A

Page 7 of European Technical Assessment ETA-03/0044 of 7 February 2023

English translation prepared by DIBt

*Class **B**ROOF (t1)

The classification is valid for the following supporting decks:

- all roof pitches
- any non-combustible continuous deck with a minimum thickness of 10 mm
- any wooden continuous deck with a minimum thickness of 16 mm and with gaps not exceeding 0.5 mm Any other roof systems for which classification documents for B_{ROOF} (t1) according EN 13501-5 are available.

Class BROOF (t2)

The classification is valid for the following supporting decks:

- all roof pitches
- · On any polyester reinforced thermoplastic waterproofing membrane with a thickness greater than
- 1,1 mm with a non-combustible substrate with density ≥ 125,5 kg/m³.

Any other roof systems for which classification documents for BROOF (t2) according EN 13501-5 are available.

Installation

The levels of use categories and the performances of the roof waterproofing can be assumed only, if the installation is carried out according to the installation instructions stated in the technical file of the manufacturer, in particular taking account of the following points:

- installation by appropriately trained personnel
- installation of only those components which are marked components of the kit
- installation with the required tools and adjuvants
- precautions during installation
- inspecting the surface for cleanliness and correct preparation, if need be, applying a primer before applying the product
- inspecting compliance with suitable weather and curing conditions
- finding out whether to the given ambient temperature the application with the adjustment for summer or winter is to be accomplished
- ensuring a thickness of the waterproofing of at least 2.0 mm by processing appropriate minimum quantities of material
- inspections during installation and of the finished product and documentation of the results

"KEMPEROL 2K-PUR" and "KEMPEROL 2C" KEMPER SYSTEM GmbH & Co. KG

Reaction to external fire and Intended use specifications
