NEW

The Kemperol® Reflect 2K FR "Cool Roof" System

NEW KEMPEROL® REFLECT 2K FR "COOL ROOF" SYSTEM

Kemperol® Reflect 2K FR is a cold liquid-applied, fully reinforced, highly reflective, fire-rated Cool Roof resin system. The system can improve building energy efficiency, contribute to the reduction of the urban heat island effect, meet the LEED V2009 and LEED V4 requirements, and complies with other cool roof codes. Engineered and introduced in Germany, the system is now made in the USA.

The new bright white formulation has been tested and is listed by Cool Roof Rating Council (www.coolroofs.org). Kemperol® Reflect 2K FR boasts an initial SRI (Solar Reflectance Index) value of 110.

The easy-to-apply, fully-reinforced membrane is solvent-free, odor-free, and low VOC like the best-selling Kemperol® 2K-PUR system. The new liquid waterproofing system is applied in the same manner, curing to a bright white finish. No topcoat is necessary, which reduces labor costs and installation time. The new Cool Roof resin system consists of 70% rapidly renewable resources and is fire rated for Class-A roof assemblies.

The state-of-the-art Kemperol membrane system fully adheres to the substrate, and is self-flashing and self-terminating for easy installation and seamless edge-to-edge protection. It can reliably seal roof perimeters, multiple penetrations, and virtually any architectural detail with extended warranty protection. The installed system is fully reinforced with 165 gram weight polyester fleece which absorbs the resin and provides consistent membrane thickness in a single application.

ADVANTAGES AT A GLANCE

- Kemperol® Reflect 2K FR Roofing membrane provides the benefits of a Kemper System membrane with the advantages of a high SRI Cool Roof.
- Cool Roofing with a high SRI value can significantly reduce the size of hardscape areas requiring mitigation as per LEED V4.
- Cool Roofing can minimize the heat island effect, resulting in lower temperatures in built-up urban areas.
- Cool Roofing provides a highly reflective and highly emissive roof surface which can result in a cooler interior or building temperature. During the summer months this can provide energy savings on air conditioning.
- Cool Roofing can increase the efficiency of solar panels.
