Technical Data Sheet

S KEMPER

SYSTEM

Work pack includes: Component A: Gray or White Resin, Component B: Catalyst Powder

Product Description	KEMPEROL® AC SPEED FR is a two component, quick-curing, UV-stable, high performance, fire- rated, cold liquid-applied Polymethylmethacrylate (PMMA) roofing and waterproofing resin that can achieve same day application.
	KEMPEROL [®] AC SPEED FR reinforced membrane system can be surfaced with a KEMPERDUR [®] AC Traffic Coating and KEMPERDUR [®] AC FINISH to achieve desired function and appearance.
Composition & Materials	A monolithic membrane is created in the field by combining the KEMPEROL® AC SPEED FR two-part, cold liquid-applied PMMA resin with KEMPEROL® 120 polyester reinforcing fleece.
Use	KEMPEROL®AC SPEED FR membrane is suitable for exterior roofing and waterproofing applications including green, white, and blue roofs, plazas, balconies, terraces, park decks, and flashings. The membrane achieves Class A fire rating as part of an assembly in accordance with ASTM E 108 / UL 790.
Limitations	KEMPEROL [®] AC Speed FR membrane may be applied when the ambient temperature is between 23° F (-5° C) and a maximum of 95° F (35° C). The substrate temperature must be a minimum of 5 degrees above the dew point.
	Note: Extra caution should be taken in below freezing temperatures. The viscosity increases with falling temperature. Ensure sufficient positive airflow over freshly applied AC Speed FR material during entire curing period to facilitate complete cure.
Yield	KEMPEROL [®] 120 Fleece: 60 ft ² (5.6 m ²) per 15 kg work pack
	Note: All yields are approximate and may vary depending upon smoothness and absorbency of substrate.
Storage	Always store in cool and dry location. Do not store in direct sunlight or in a temperature below 50°F (10°C) or above 80°F (27°C). Approximate shelf life 18 months with proper storage. Catalyst Powder must be stored separately. For best use, 24 hours before application, the material is to be acclimated at temperatures between 65-70 °F (18-21 °C).
Precautions	Review Safety Data Sheets before handling, available online at www.kempersystem.net.
Surface Preparation	All surfaces must be free from gross irregularities, loose, unsound or foreign material such as dirt, ice, snow, water, grease, oil, release agents, lacquers, or any other condition that would be detrimental to adhesion of the primer and membrane. This requires careful preparation of existing horizontal and vertical substrates; cracks are filled, expansion joints are prepared, flashings are removed or modified, and termination points are determined. Substrates and penetrations are prepared to rigorous industry standards, and may require scarifying, sandblasting or grinding in some cases to achieve a suitable substrate.
Priming	After substrate preparation, temporary watertightness can be achieved with the application of KEMPERTEC® AC Primer and Joint Sealant, and proper tie offs. KEMPERTEC® AC Primer may be brushed or rolled onto any clean and prepared surface. Allow primer to cure completely prior to application of the KEMPEROL® membrane.

Disposal	Cured KEMPEROL [®] AC Speed FR may be disposed of in standard landfills. This is accomplished by thoroughly mixing all components. Uncured resin is considered a hazardous material and must be handled in accordance with local, state and federal regulations. Do not throw uncured resin away.
