

Better Performance with Cost Savings - Just Child's Play

Mereside School, Blackpool

Kemper System's Stratex warm roof system has been installed on the Mereside School Children's Centre, commissioned by Blackpool Borough Council.

Stratex uses interlocking insulation boards, which reduce cold bridging and give smoother intersections and improved aesthetics when the Kemperol cold liquid waterproofing membrane is applied.

The Stratex system easily handled the complex curvilinear roof design and was a late substitute by the design team for the warm roof initially specified because of significant cost savings, easier installation and better performance.

Stratex, which comprises insulation, vapour barrier and waterproofing, is a single-source system installed only by Kemper authorised contractors.
